

Addressing four dimensions of sustainability

Circularity  
Food systems  
Climate  
**Biodiversity** ↗

**THE CHALLENGE**

Biodiversity loss is mainly driven by human conversion of forest, wetlands etc for agricultural and urban use, also causing climate change\*

Food packaging is essential for providing safe access and protection; it should be responsibly sourced, from renewable origins, and support restoration of nature

# Protecting Biodiversity

Responsibly sourced, renewable materials

Protecting biodiversity, mitigating climate change

**TAKING ACTIONS**

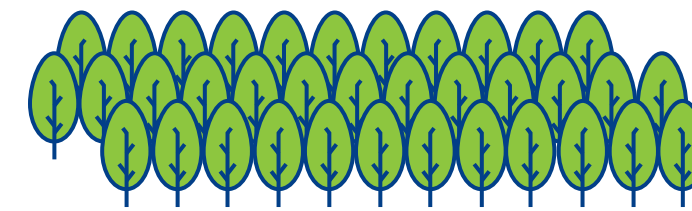

**GOING FURTHER TOGETHER**

## Responsibly sourced, renewable content

Our carton packages are made of an average of 70% paper, a renewable resource

All paperboard and plant-based polymers in our carton packages come from certified and controlled sources\*\*\*

By 2025, 100% of Tetra Pak's raw materials with the most significant land footprint are deforestation-free

Develop the world's most sustainable food package\*\*\*\*

## Reducing water, energy and waste

Our food processing and packaging equipment is designed to reduce energy, waste and consumption of valuable drinking water

Our food processing and services experts help customers reduce energy, waste and water usage

Our best practice food processing lines aim to by 2030 reduce water usage by 50%\*\*

## Land restoration programme

The Araucaria Conservation Programme in Brazil, aiming to restore up to 7,000 hectares of degraded area by 2030

During the first year the Araucaria Conservation Programme restored 87 hectares of rural land

In the first half of 2023, three new areas are scheduled to be restored, totalling about 70 hectares in the state of Santa Catarina

Help restore and protect biodiversity in degraded rural land in Brazil.

Protecting and restoring biodiversity is essential to fighting climate change, and paper-based carton packages can make a difference. Let's not settle for what we can achieve today,

# Let's GO further.

## Go nature. Go carton.
