Inbound Discrepancies

This is a list of all inbound discrepancies that you had last month on deliveries to Technical Service. Inbound discrepancies are logistical errors on deliveries, such as when the supplier:

- Ship too many parts
- Ship too few parts
- Ship wrongly packed parts
- Ship wrong part to us
- Have wrong documentation

If you have discrepancies, please assure you take appropriate action to find and eliminate root causes. You should see a blank list as a confirmation that you did not have any inbound discrepancies last month.

If the supplier has any questions regarding this send out, they should contact their responsible Supply Chain Analysts.
